Last updated: 2026-09-10

What plans does FlowStack offer?

FlowStack has four plans: Starter (free), Growth, Scale, and Enterprise. Starter is designed for individuals and small experiments. Growth is designed for growing teams. Scale is designed for larger teams with high execution volume. Enterprise is contract-based with custom terms.

What are the limits on the Starter plan?

Starter includes up to 3 team members, 1,000 workflow executions per month, 10 active workflows, 5 integrations, and basic email support. Starter does not include advanced execution history or priority support.

What are the limits on the Growth plan?

Growth includes up to 15 team members, 10,000 workflow executions per month, 100 active workflows, 25 integrations, priority support, and advanced execution history. Growth is the most common plan for small and mid-sized teams.

What are the limits on the Scale plan?

Scale includes up to 50 team members, 100,000 workflow executions per month, unlimited active workflows, unlimited integrations (subject to fair-use controls), priority support with escalation, and advanced audit and administration features.

What does the Enterprise plan include?

Enterprise terms are contract-based. Enterprise typically includes custom execution volume, custom seat limits, SSO and advanced security options, dedicated support terms, and custom retention and procurement requirements. Pricing is quoted per customer — the support assistant must not invent an Enterprise price.

How are executions counted?

An execution is counted when a workflow run reaches execution processing. Both successful and failed runs may count if they reach that stage. Failed attempts that are rejected before execution

processing (for example, invalid input rejected at the trigger) do not count. Customers should review execution history for the exact event details of any specific run.

When do usage limits reset?

Execution limits reset at the beginning of each monthly billing period. The reset date matches your subscription renewal date. For example, if your subscription renews on the 12th, your execution counter resets on the 12th of every month.

What happens if I exceed my execution limit?

If you exceed your monthly execution limit, new workflow executions are paused until the next billing period or until you upgrade. Existing workflows, integrations, and data remain accessible. You'll receive an email notification when you reach 80% and 100% of your limit.

Can I buy extra executions without upgrading?

Yes. Extra execution packs are available on Growth and Scale. A pack of 10,000 additional executions costs \$29 and does not expire at the end of the month. Packs can be purchased from Settings → Billing → Usage.

How do I check my current usage?

Go to Settings → Billing → Usage in your workspace. This page shows executions used this period, remaining executions, active workflows, connected integrations, and current team member count. The same data is available via the API at GET /v1/workspace/usage.

How do I upgrade my plan?

Go to Settings → Billing → Plan and select the new plan. Upgrades take effect immediately after payment confirmation. The new plan's limits apply to activity after the upgrade. Previously consumed usage is not removed or credited by an upgrade.

How do I downgrade my plan?

Downgrades can be scheduled from Settings → Billing → Plan. A downgrade takes effect at the end of the current billing period. If your current usage exceeds the target plan's limits, you'll be prompted to reduce usage (deactivate workflows, remove integrations, or remove team members) before the downgrade completes.

What happens to my workflows if I downgrade?

If you downgrade and have more active workflows than the target plan allows, you'll be asked to deactivate workflows until you're within the new limit. Deactivated workflows retain their configuration and can be reactivated after an upgrade. Data and execution history are retained.

Can I have multiple workspaces?

Yes. Each workspace has its own plan, usage counter, members, and integrations. Billing is per workspace. You can switch between workspaces from the workspace dropdown in the top-left corner.

How do I ask about my own plan?

The support assistant uses your account context to answer questions like "what plan am I on?" or "how many executions do I have left?" — you don't need to provide that information again if it's already on your account.
